Re: Notice of Violation and Intent to File Suit under the Clean Water Act

To Whom It May Concern:

Brodsky & Smith, LLC ("Brodsky Smith") represents [Personal Privacy 6] a citizen of the State of California. This letter is to give notice that Brodsky Smith, on [Personal Privacy 6] behalf, intends to file a civil action Jack Engle & Co. ("Jack Engle") for violations of the Federal Water Pollution Control Act, 33 U.S.C. § 1251 *et seq.* ("Clean Water Act" or "CWA") at Jack Engle's facility located at 8440 S. Alameda Street, Los Angeles, CA 90001 (the "Facility").

[Personal Privacy 6] is a citizen of the State of California who is concerned with the environmental health the Compton Creek, and uses and enjoys the waters of the Compton Creek, its inflows, and other areas of the overall Los Angeles River Watershed, of which the Compton Creek is a part. [Personal Privacy 6] use and enjoyment of these waters are negatively affected by the pollution caused by Jack Engle's operations. Additionally, [Personal Privacy 6] acts in the interest of the general public to prevent pollution in these waterways, for the benefit of their ecosystems, and for the benefits of all individuals and communities who use these waterways for various recreational, educational, and spiritual purposes.

This letter addresses Jack Engle's unlawful discharge of pollutants from the Facility via indirect flow into the Compton Creek and the overall Los Angeles River Watershed.<sup>1</sup> Specifically, investigation of

<sup>1</sup> Jack Engle's Notice of Intent ("NOI") filed with the Los Angeles Regional Water Quality Control Board ("LARWQCB") lists the receiving waters of the Facility as the "Los Angeles River" via indirect flow. Upon investigation, it is [Personal Privacy 6] knowledge and belief that the most immediate receiving water of the

the Facility has uncovered significant, ongoing, and continuous violations of the CWA and the National Pollutant Discharge Elimination System ("NPDES") General Permit No CAS000001 [State Water Resources Control Board] Water Quality Orders No. 2014-0057-DWQ (the "Industrial Stormwater Permit") and 92-12-DWQ (as amended by Order No. 97-03-DWQ) (the "Previous Industrial Stormwater Permit").<sup>2</sup>

CWA section 505(b) requires that sixty (60) days prior to the initiation of a civil action under CWA section 505(a), a citizen must give notice of his or her intent to file suit. 33 U.S.C. § 1365(b). Notice must be given to the alleged violator, the U.S. Environmental Protection Agency ("EPA"), and the State in which the violations occur. As required by section 505(b), this Notice of Violation and Intent to File Suit provides notice to Jack Engle of the violations that have occurred and which continue to occur at the Facility. After the expiration of sixty (60) days from the date of this Notice of Violation and the Intent to File Suit, Personal Privacy 6 intends to file suit in federal court against Jack Engle under CWA section 505(a) for the violations described more fully below.

During the 60-day notice period, Personal Privacy 6 is willing to discuss effective remedies for the violations noticed in this letter. We suggest that Jack Engle contact Personal Privacy 6 attorneys at Brodsky & Smith within the next twenty (20) days so that these discussions may be completed by the conclusion of the 60-day notice period. Please note that we do not intend to delay the filing of a complaint in federal court, and service of the complaint shortly thereafter, even if discussions are continuing when the notice period ends.

## **I. THE LOCATION OF THE ALLEGED VIOLATIONS**

### **A. The Facility**

Jack Engle's Facility is located at 8440 S. Alameda Street, Los Angeles, CA 90001. At the Facility, Jack Engle operates as a receiver and shipper of ferrous and non-ferrous recyclable metals, purchased as the by-products of manufacturing (not from the public). At the Facility, the following industrial activities occur: (i) aluminum materials baling; (ii) storage of baled materials; (iii) shredding of ferrous and non-ferrous materials; (iv) welding; (v) compression of aluminum product into aluminum pucks; (vi) shipping and receiving of ferrous and non-ferrous recyclable product; (vii) waste storage. Other activities carried out in the regular course of business at the facility include storage of fuel and other oils, maintenance, equipment storage, and waste storage. Repair and maintenance activities carried out at the facility include, but are not limited to, electrical, plumbing, roofing, asphalt, concrete, and utilities repairs as well as janitorial duties. Possible pollutants from the Facility include total suspended solids ("TSS"), waste oils, lubricants, fuel, trash, debris, hazardous materials, oil and grease, pH, chemical oxygen demand ("COD") heavy metals such as iron, zinc, aluminum, cadmium, lead, copper, as well as other pollutants. Stormwater from the Facility discharges, indirectly, into the Compton Creek.

### **B. The Affected Water**

The Compton Creek and overall Los Angeles River Watershed are waters of the United States. The CWA requires that water bodies such as the Compton Creek and overall Los Angeles River Watershed meet water quality objectives that protect specific "beneficial uses." The beneficial uses of the Compton Creek and overall Los Angeles River Watershed include commercial and sport fishing, estuarine habitat, fish migration, navigation, preservation of rare and endangered species, water contact and non-contact

---

Facility is the Compton Creek, via indirect flow, and that the Compton Creek is a part of the Los Angeles River Watershed.

<sup>2</sup> On April 1, 2014, the State Water Resources Control Board adopted an updated NPDES General Permit for Discharges Associated with Industrial Activity, Water Quality Order No. 2014-57-DWQ, which has taken force or effect on its effective date of July 1, 2015. As of the effective date, Water Quality Order No. 2014-57-DWQ has superseded and rescinded the prior Industrial Stormwater Permit except for purposes of enforcement actions brought pursuant to the prior permit.

recreation, shellfish harvesting, fish spawning, and wildlife habitat. Contaminated stormwater from the Facility adversely affects the water quality of the Compton Creek and overall Los Angeles River Watershed, and threatens the beneficial uses and ecosystem of these watersheds, which includes habitats for threatened and endangered species.

## II. THE FACILITY'S VIOLATIONS OF THE CLEAN WATER ACT

It is unlawful to discharge pollutants to waters of the United States, such as the Compton Creek, without an NPDES permit or in violation of the terms and conditions of an NPDES permit. CWA § 301(a), 33 U.S.C. § 1311(a); *see also* CWA § 402(p), 33 U.S.C. § 1342(p) (requiring NPDES permit issuance for the discharge of stormwater associated with industrial activities). The Industrial Stormwater Permit authorizes certain discharges of stormwater, conditioned on compliance with its terms.

Jack Engle has submitted a Notice of Intent ("NOI") to be authorized to discharge stormwater from the Facility under the Industrial Stormwater Permit since as early as 1992. However, information available to Personal Privacy 6 indicates that stormwater discharges from the Facility have violated several terms of the Industrial Stormwater Permit and the CWA. Apart from discharges that comply with the Industrial Stormwater Permit, the Facility lacks NPDES permit authorization for any other discharges of pollutants into waters of the United States.

### A. Discharges in Excess of BAT/BCT Levels

The Effluent Limitations of the Industrial Stormwater Permit prohibit the discharge of pollutants from the facility in concentrations above the level commensurate with the application of best available technology economically achievable ("BAT") for toxic pollutants<sup>3</sup> and best conventional pollutant control technology ("BCT") for conventional pollutants.<sup>4</sup> Industrial Stormwater Permit § I(D)(32), II(D)(2); Previous Industrial Stormwater Permit, Order Part B(3). The EPA has published Benchmark values set at the maximum pollutant concentration present if an industrial facility is employing BAT and BCT, as listed in Attachment 1 to this letter.<sup>5</sup> These benchmark values are reiterated and incorporated into the Industrial Stormwater Permit. *See* Industrial Stormwater Permit § XI(B) Tables 1-2.

Additionally, the Previous Industrial Stormwater Permit notes that effluent limitation guidelines for several named industrial categories have been established and codified by the Federal Government. *See* Previous Industrial Stormwater Permit pp. VIII. The Previous Industrial Stormwater Permit mandates that for facilities that fall within such industrial categories, compliance with the listed BAT and BCT for the specified pollutants listed therein must be met in order to be in compliance with the Previous Industrial Stormwater Permit. *Id.* Jack Engle falls within these named industrial categories and it must have complied with the effluent limitations found therein in order to have been in compliance with the Previous Industrial Stormwater Permit during its effective period. In addition, the Industrial Stormwater Permit requires dischargers to comply with Effluent Limitations "consistent with U.S. EPA's 2008 Multi Sector General Permit for Stormwater Discharges Associated with Industrial Activity (the "2008 MSGP")". *See* Industrial Stormwater Permit § I(D)(33). The 2008 MSGP has specific numeric effluent limitations based upon Standard Industrial Classification ("SIC") codes. Furthermore, these SIC code based benchmark values are reiterated and incorporated into the Industrial Stormwater Permit. *See* Industrial Stormwater

<sup>3</sup> BAT is defined at 40 C.F.R. § 437.11 *et seq.* Toxic pollutants are listed at 40 C.F.R. § 401.15 and include copper, lead, and zinc, among others.

<sup>4</sup> BCT is defined at 40 C.F.R. § 437.1 *et seq.* Conventional pollutants are listed at 40 C.F.R. § 401.16 and include BOD, TSS, oil and grease, pH, and fecal coliform.

<sup>5</sup> The Benchmark values are part of the EPA's Multi-Sector General Permit ("MSGP") and can be found at: [http://www.epa.gov/npdess/pubs/msgp2008\\_finalpermit.pdf](http://www.epa.gov/npdess/pubs/msgp2008_finalpermit.pdf). *See* 73 Fed. Reg. 56, 572 (Sept. 29, 2008) (Final National Pollutant Discharge Elimination System (NPDES) General Permit for Stormwater Discharges From Industrial Activities).

Permit § XI(B) Tables 1-2.<sup>6</sup> Notably, Jack Engle is classified as falling under SIC Code 5093, relating to scrap and waste materials, requiring it to be within numerical effluent limitations for (i) pH; (ii) Oil and Grease; (iii) Total Suspended Solids; (iv) Iron; (v) Lead; (vi) Aluminum; (vii) Zinc; and (ix) COD.<sup>7</sup> Based on Jack Engle's self-reporting data and/or lack thereof, Jack Engle has not met this requirement and was in violation of the Previous Stormwater Permit over a period of approximately five (5) years.

Jack Engle's self-reporting of industrial stormwater discharges and/or lack thereof show a pattern of exceedances of Benchmark values and/or a failure to adequately monitor numerical pollutant discharge values in every instance of self-reporting. *See* Attachment 2. This pattern of exceedances of benchmark values and/or a lack of self-reporting indicate that Jack Engle has failed and is failing to employ measures that constitute BAT and BCT in violation of the requirements of the Industrial Stormwater Permit and Previous Industrial Stormwater Permit. Personal Privacy 6 alleges and notifies Jack Engle that its stormwater discharges from the Facility have consistently contained and continue to contain levels of pollutants that exceed benchmark values for Oil and Grease, COD, Copper, and Zinc.

Jack Engle's ongoing discharges of stormwater containing levels of pollutants above EPA Benchmark values and BAT and BCT based levels of control also demonstrate that Jack Engle has not developed and implemented sufficient Best Management Practices ("BMPs") at the Facility. Proper BMPs could include, but are not limited to, moving certain pollution-generating activities under cover or indoors capturing and effectively filtering or otherwise treating all stormwater prior to discharge, frequent sweeping to reduce build-up of pollutants on-site, installing filters on downspouts and storm drains, and other similar measures.

Jack Engle's failure to develop and/or implement adequate pollution controls to meet BAT and BCT and the Facility violates and will continue to violate the CWA and the Industrial Stormwater Permit each and every day Jack Engle's discharges stormwater without meeting BAT/BCT. Personal Privacy 6 alleges that Jack Engle has discharged stormwater containing excessive levels of pollutants from the Facility to the Compton Creek during at least every significant local rain event over 0.2 inches in the last five (5) years.<sup>8</sup> Attachment 3 compiles all dates in the last five (5) years when a significant rain event occurred. Jack Engle is subject to civil penalties for each violation of the Industrial Stormwater Permit and the CWA within the past five (5) years.

#### **B. Discharges Impairing Receiving Waters**

The Industrial Stormwater Permit's Discharge Prohibitions disallow stormwater discharges that cause or threaten to cause pollution, contamination, or nuisance. *See* Industrial Stormwater Permit § III; Previous Industrial Stormwater Permit, Order Part A(2). The Industrial Stormwater Permit also prohibits stormwater discharges to surface or groundwater that adversely impact human health or the environment. *See* Industrial Stormwater Permit § VI(b)-(c); Previous Industrial Stormwater Permit, Order Part C(1). Receiving Water Limitations of the Industrial Stormwater Permit prohibit stormwater discharges that cause or contribute to an exceedance of applicable Water Quality Standards ("WQS") contained in a Statewide Water Quality Control Plan or the applicable Regional Water Board's Basin Plan. *See* Industrial Stormwater Permit § VI(a); Previous Industrial Stormwater Permit at Order Part C(2). Applicable WQS

---

<sup>6</sup> Of note, Jack Engle recognizes the requirement to test for these additional SIC code related pollutants, and has explicitly stated it would sample such parameters in every Qualifying Storm Event in which a sampling was taken as part of its Monitoring and Reporting Plan at § M(C) of its most recent SWPPP.

<sup>7</sup> Jack Engle also tests for pollutant parameters of Cadmium and Copper as mentioned in Section § M(C) of its most recent SWPPP due to the constituents being either Total Maximum Daily Load/303(d) constituents and/or HUC-10/Receiving Water 303(d) impairments.

<sup>8</sup> Significant local rain events are reflected in the rain gauge data available at: <http://www.ncdc.noaa.gov/cdo-web/search>.

are set forth in the California Toxic Rule ("CTR")<sup>9</sup> and Chapter 3 of the Los Angeles Region (Region 4) Water Quality Control Plan (the "Basin Plan").<sup>10</sup> See Attachment 1. Exceedances of WQS are violations of the Industrial Stormwater Permit, the CTR, and the Basin Plan.

The Basin Plan establishes WQS for all Inland Surface and Coastal waters of Los Angeles and Ventura Counties, including but not limited to the following:

- Waters shall not contain suspended or settleable material in concentrations that cause nuisance or adversely affect beneficial users.
- Waters shall be free of changes in turbidity that cause nuisance or adversely affect beneficial uses. Increases in natural turbidity attributable to controllable water quality factors shall not exceed 20% where natural turbidity is between 0 and 50 nephelometric turbidity units ("NTU"), and shall not exceed 10% where the natural turbidity is greater than 50 NTU.
- All waters shall be maintained free of toxic substances in concentrations that are toxic to, or that produce detrimental physiological responses in, human, plant, animal, or aquatic life.
- Surface waters shall not contain concentrations of chemical constituents in amounts that adversely affect any designated beneficial use.

**Personal Privacy 6** alleges that Jack Engle's stormwater discharges have caused or contributed to exceedances of Receiving Water Limitations in the Industrial Stormwater Permit and the WQS set forth in the Basin Plan and CTR. These allegations are based on Jack Engle's self-reported data submitted to the Los Angeles Regional Water Quality Control Board. These sampling results indicate that Jack Engle's discharges are causing or threatening to cause pollution, contamination, and/or nuisance; adversely impacting human health or the environment; and violating applicable WQS.

**Personal Privacy 6** alleges that each day that Jack Engle has discharged stormwater from the Facility, Jack Engle's stormwater has and/or may have contained levels of pollutants that exceeded one or more of the Receiving Water Limitations and/or applicable WQS in the Compton Creek and overall Los Angeles River Watershed. **Personal Privacy 6** alleges that Jack Engle has discharged stormwater exceeding Receiving Water Limitations and/or WQS from the Facility to the Compton Creek and overall Los Angeles River Watershed during at least every significant local rain event over 0.2 inches in the last five (5) years. See Attachment 3. Each discharge from the Facility that violates a Receiving Water Limitation or has caused or contributed, or caused or contributes, to an exceedance of an applicable WQS constitutes a separate violation of the Industrial Stormwater Permit and the CWA Jack Engle is subject to penalties for each violation of the Industrial Stormwater Permit and the CWA within the past five (5) years.

#### **C. Failure to Develop and Implement an Adequate Stormwater Pollution Prevention Plan**

The Industrial Stormwater Permit requires dischargers to develop and implement an adequate Storm Water Pollution Prevention Plan ("SWPPP"). See Industrial Stormwater Permit, § X(B); Previous Industrial Stormwater Permit § A(1)(a). The Industrial Stormwater Permit also requires dischargers to make all necessary revisions to existing SWPPPs promptly. See Industrial Stormwater Permit, § X(B); Previous Industrial Stormwater Permit at Order Part E(2).

---

<sup>9</sup> The CTR is set forth at 40 C.F.R. § 131.38 and is explained in the Federal Register preamble accompanying the CTR promulgation set forth at 65 Fed. Reg. 31, 682 (May 18, 2000).

<sup>10</sup> The Basin Plan is published by the Los Angeles Regional Water Quality Control Board at: [http://www.waterboards.ca.gov/losangeles/water\\_issues/programs/basin\\_plan/basin\\_plan\\_documentation.shtml](http://www.waterboards.ca.gov/losangeles/water_issues/programs/basin_plan/basin_plan_documentation.shtml).

The SWPPP must include, among other requirements, the following: a site map, a list of significant materials handled and stored at the site, a description and assessment of all Jack Engle pollutant sources, a description of the BMPs that will reduce or prevent pollutants in stormwater discharges, specification of BMPs designed to reduce pollutant discharge to BAT and BCT levels, a comprehensive site compliance evaluation completed each reporting year, and revisions to the SWPPP within 90 days after a facility manager determines that the SWPPP is in violation of any requirements of the Industrial Stormwater Permit. *See* Industrial Stormwater Permit, § X(A); Previous Industrial Stormwater Permit Section § A.

Based on information available to <sup>Personal Privacy 6</sup> Jack Engle has failed to prepare and/or implement an adequate SWPPP and/or failed to revise the SWPPP to satisfy each of the requirements of § X(A) of the Industrial Stormwater Permit and/or § A Previous Industrial Stormwater Permit. For Example, Jack Engle SWPPP does not include and/or Jack Engle has not implemented adequate BMPs designed to reduce pollutant levels in discharges to BAT and BCT levels in accordance with Section A(8) of the Industrial Stormwater Permit, as evidenced by the data in Attachment 2. For example, Jack Engle has clearly failed to implement an adequate the Monitoring and Reporting Program ("MRP") described in § M of its most recent SWPPP on a consistent basis for a period of at least five (5) annual reporting periods.

Accordingly, Jack Engle has violated the CWA each and every day that it has failed to develop and/or implement an adequate SWPPP meeting all of the requirements of § X(A) of the Industrial Stormwater Permit and/or § A Previous Industrial Stormwater Permit, and Jack Engle will continue to be in violation every day until it develops and implements an adequate SWPPP. Jack Engle is subject to penalties for each violation of the Industrial Stormwater Permit and the CWA occurring within the past five (5) years.

**D. Failure to Develop and Implement an Adequate Monitoring and Reporting Program and to Perform Annual Comprehensive Site Compliance Evaluations**

The Industrial Stormwater Permit requires facility operators to develop and implement a Monitoring and Reporting Program ("MRP"). *See* Industrial Stormwater Permit, § XI; Previous Industrial Stormwater Permit § B(1) and Order Part E(3). The Industrial Stormwater Permit requires that MRP ensure that each the facility's stormwater discharges comply with the Discharge Prohibitions, Effluent Limitations, and Receiving Water Limitations specified in the Industrial Stormwater Permit. *Id.* Facility operators must ensure that their MRP practices reduce or prevent pollutants in stormwater and authorized non-stormwater discharges as well as evaluate and revise their practices to meet changing conditions at the facility. *Id.* This may include revising the SWPPP as required by § X(A) of the Industrial Stormwater Permit and/or § A Previous Industrial Stormwater Permit.

The MRP must measure the effectiveness of BMPs used to prevent or reduce pollutants in stormwater and authorized non-stormwater discharges, and facility operators must revise the MRP whenever appropriate. *See* Industrial Stormwater Permit, § XI; Previous Industrial Stormwater Permit § at Section B. The Industrial Stormwater Permit requires facility operators to visually observe and collect samples of stormwater discharges from all drainage areas. *Id.* Facility operators are also required to provide an explanation of monitoring methods describing how the facility's monitoring program will satisfy these objectives. *Id.*

Jack Engle has been operating the Facility with an inadequately developed and/or inadequately implemented MRP, in violation of the substantive and procedural requirements set forth in Section B of the Industrial Stormwater permit. For example, the data in Attachment 2 indicates that Jack Engle's monitoring program has not ensured that stormwater dischargers are in compliance with the Discharge Prohibitions, Effluent Limitations, and Receiving Water Limitations of the Industrial Stormwater Permit as required by the Industrial Stormwater Permit, § XI and/or the Previous Industrial Stormwater Permit § B. The monitoring has not resulted in practices at the Facility that adequately reduce or prevent pollutants in stormwater as required by Industrial Stormwater Permit, § XI and/or the Previous Industrial Stormwater Permit § B. Additionally, the Industrial Stormwater Permit requires dischargers to comply with Effluent Limitations "consistent with U.S. EPA's 2008 Multi Sector General Permit for Stormwater Discharges

Associated with Industrial Activity (the "2008 MSGP"). The 2008 MSGP has specific numeric effluent limitations based upon Standard Industrial Classification ("SIC") codes. Furthermore, these SIC code based benchmark values are reiterated and incorporated into the Industrial Stormwater Permit. See Industrial Stormwater Permit § XI(B) Tables 1-2. Notably, Jack Engle is classified as falling under SIC Code 5093, relating to scrap and waste materials, requiring it to be within numerical effluent limitations for (i) pH; (ii) Oil and Grease; (iii) Total Suspended Solids; (iv) Iron; (v) Lead; (vi) Aluminum; (vii) Zinc; and (ix) COD.<sup>11</sup> As previously stated, and in clear violation of the terms of the Industrial Stormwater Permit, Jack Engle has consistently reported benchmark exceedances and/or failed to report testing results for any applicable effluent limitation in their annual reports for the past five (5) annual reporting periods. See Attachments 2, 3. Therefore, the data in Attachment 2 indicates that Jack Engle's monitoring program has not effectively identified or responded to compliance problems at the Facility or resulted in effective revision of the BMPs in use or the Facility's SWPPP to address such ongoing problems as required by Industrial Stormwater Permit, § XI and/or the Previous Industrial Stormwater Permit § B.

As a part of the MRP, the Industrial Stormwater Permit specifies that Facility operators shall collect a total of four (4) stormwater samples throughout an annual reporting period. Specifically the Industrial Stormwater Permit requires, "The discharger to collect and analyze samples from two (2) Qualifying Storm Events ('QSE's) within the first half of each reporting year (July 1 to December 31), and two (2) QSEs within the second half of each reporting year (January 1 to June 30)." Industrial Stormwater Permit § XI B(2).<sup>12</sup> Furthermore, should facility operators fail to collect samples from the first storm event of the wet season, they are still required to collect samples from two other storm events during the wet season, and explain in the annual report why the first storm event was not sampled. *Id.* Despite this requirement Jack Engle has submitted the annual report for the 2011-2012 and 2012-2013 annual reporting periods with no testing data whatsoever, and has submitted testing data for an insufficient number of QSEs in the 2014-2015 and 2015-2016 annual reporting periods. Additionally, Jack Engle has submitted testing results for the 2014-2015 annual reporting period without submitting any corresponding laboratory reports. Moreover, Jack Engle has failed to adequately explain why such sampling was not included.

The Industrial Stormwater Permit also requires dischargers to include laboratory reports with their Annual Reports submitted to the Regional Board. See Industrial Stormwater Permit, Fact Sheet § O and/or Previous Industrial Stormwater Permit § B(14). Notably, Jack Engle has not submitted any laboratory reports with testing data for any QSE in the 2011-2012, 2012-2013, and 2014-2015 annual reporting periods. Additionally, Jack Engle has failed to adequately explain why such adequate sampling was not included.

As a result of Jack Engle's failure to adequately develop and/or implement an adequate MRP at the Facility, Jack Engle has been in daily and continuous violation of the Industrial Stormwater Permit and the CWA each and every day for the past five (5) years. These violations are ongoing. Jack Engle will continue to be in violation of the monitoring and reporting requirement each day that Jack Engle fails to adequately develop and/or implement an effective MRP at the Facility. Jack Engle is subject to penalties for each violation of the Industrial Stormwater Permit and the CWA occurring for the last five (5) years.

#### **E. Failure to Comply with Level 1 Exceedance Response Action Requirements**

When the Industrial Stormwater Permit became effective on July 1, 2015, all permitted facilities were placed into "baseline status" for all parameters listed in Table 2 of the Industrial Stormwater Permit.

---

<sup>11</sup> Jack Engle also tests for pollutant parameters of Cadmium and Copper as mentioned in Section § M(C) of its most recent SWPPP due to the constituents being either Total Maximum Daily Load/303(d) constituents and/or HUC-10/Receiving Water 303(d) impairments.

<sup>12</sup> Under the Previous Industrial Stormwater Permit, only two samplings per year was required, specifically, from "the first hour of discharge from (1) the first storm event of the wet season, and (2) at least one other storm event in the wet season." See Previous Industrial Stormwater Permit § B(5)(a). Of note, Defendants acknowledge this requirement in their most current SWPPP, at § M.5.

Industrial Stormwater Permit § XII(B). Permitted facilities are placed into "Level 1 Status" if sampling indicates that an annual or instantaneous NAL exceedance for an applicable pollutant parameter has occurred. Industrial Stormwater Permit § XII(C). Level 1 status commences on July 1 following the reporting year during which the NAL exceedance(s) occurred, and the discharger enters the Exceedance Response Action ("ERA") process. *Id.* The ERA process requires the discharger to conduct an evaluation, assisted by a Qualified Industrial Storm Water Practitioner (a "QISP"), of the industrial pollutant sources at the facility that are or may be related to the NAL exceedance(s) by October 1 following the commencement of Level 1 Status. *Id.* The evaluation must also include the identification of the "corresponding BMPs in the SWPPP and any additional BMPs and SWPPP revisions necessary to prevent future NAL exceedances and to comply with the requirements of the General Permit." *Id.* Furthermore, the Industrial Stormwater Permit states, "Although the evaluation may focus on the drainage areas where the NAL exceedance(s) occurred, all drainage areas shall be evaluated." *Id.*

Based upon the Level 1 status evaluation, a discharger is required, as soon as practicable but no later than January 1 following the commencement of Level 1 status, to prepare a Level 1 ERA Report. Industrial Stormwater Permit § XII(C)(2). The Level 1 ERA Report must be prepared by a QISP and include a summary of the Level 1 ERA evaluation and a detailed description of the SWPPP revisions and any additional BMPs for each parameter that exceeded an NAL. *Id.* The SWPPP revisions and additional BMP development and implementation must also be completed by January 1 following the commencement of level 1 status, and the Level 1 status discharger is required to submit via SMARTS the Level 1 ERA Report certifying the evaluation has been conducted, and SWPPP revisions and BMP implementation have been completed. *Id.* The certification is also required to provide the QISP's identification number, name, and contact information no later than January 1 following commencement of level 1 status. *Id.*

A permitted discharger's Level 1 status for a parameter will return to Baseline status if a Level 1 ERA report has been completed, all identified additional BMPs have been implemented, and results from four (4) consecutive QSEs that were sampled subsequent to BMP implementation indicate no additional NAL exceedances for that parameter. Industrial Stormwater Permit § XII(C)(2)(b). A permitted discharger will enter "Level 2 status" if there are any NAL exceedances for the same parameter when the discharger is in Level 1 status. Industrial Stormwater Permit § XII(D).

Jack Engle's Facility had NAL annual average exceedances for the pollutant parameter of Copper during the 2015-2016 Annual Reporting period that resulted in Level 1 status for the Facility. The additional BMPs identified in Jack Engle's submitted Level 1 ERA Report were to be completed by January 2017, however sampling conducted by Jack Engle throughout the 2016-2017 has shown that such BMPs, if implemented, to be wholly ineffective as the Facility continues to have an annual NAL overage for Copper, and worryingly, now displays an annual NAL overage for the parameter of Oil and Grease as well. It is clear that rather than conducting a thorough evaluation to identify the BMPs in the SWPPP that correspond to the NAL exceedances at the Facility, and identify what additional BMPs are needed to prevent future NAL exceedances, Jack Engle submitted an inadequate Level 1 ERA report that is ineffective and does not comply with the Industrial Stormwater Permit.

As a result of Jack Engle's failure to adequately develop and/or implement an adequate Level 1 ERA at the Facility, Jack Engle has been in daily and continuous violation of the Industrial Stormwater Permit and the CWA each and every day for the 2016-2017 annual reporting period, continuing a pattern of violations stretching back at least five (5) years. These violations are ongoing. Jack Engle will continue to be in violation of the monitoring and reporting requirement each day that Jack Engle fails to adequately develop and/or implement an effective Level 1 ERA at the Facility. Jack Engle is subject to penalties for each violation of the Industrial Stormwater Permit and the CWA occurring for the last five (5) years.

#### **F. Unpermitted Discharges**

Section 301(a) of the CWA prohibits the discharge of any pollutant into waters of the United States unless the discharge is authorized by a NPDES Permit issued pursuant to Section 402 of the CWA. *See* 33 U.S.C. §§ 1311(a), 1342. Jack Engle sought coverage for the Facility under the Industrial Stormwater Permit, which states that any discharge from an industrial facility not in compliance with the

Industrial Stormwater Permit "must be either eliminated or permitted by a separate NPDES permit." Industrial Stormwater Permit, § III; Previous Industrial Stormwater Permit, Order Part A(1). Because Jack Engle has not obtained coverage under a separate NPDES permit and has failed to eliminate discharges not permitted by the Industrial Stormwater Permit, each and every discharge from the Facility described herein not in compliance with the Industrial Stormwater Permit has constituted and will continue to constitute a discharge without CWA Permit coverage in violation of section 301(a) of the CWA, 33 U.S.C. § 1311(a)

#### **IV. PERSON RESPONSIBLE FOR THE VIOLATIONS**

Jack Engle & Co. is the person responsible of the violations at the Facility described above.

#### **VII. REMEDIES**

Personal Privacy 6 intends, at the close of the 60-day notice period or thereafter, to file a citizen suit under CWA section 505(a) against Jack Engle for the above-referenced violations. Personal Privacy 6 will seek declaratory and injunctive relief to prevent further CWA violations pursuant to CWA sections 505(a) and (d), 33 U.S.C. § 1365(a) and (d), and such other relief as permitted by law. In addition, Personal Privacy 6 will seek civil penalties pursuant to CWA section 309(d), 33 U.S.C. § 1319(d), and 40 C.F.R. § 19.4, against Jack Engle in this action. The CWA imposes civil penalty liability of up to \$37,500 per day per violation for violations occurring after January 12, 2009. 33 U.S.C. § 1319(d); 40 C.F.R. § 19.4. Personal Privacy 6 will seek to recover attorneys' fees, experts' fees, and costs in accordance with CWA section 505(d), 33 U.S.C. § 1365(d).

As noted above, **Personal Privacy 6** and his Counsel are willing to meet with you during the 60-day notice period to discuss effective remedies for the violations noted in this letter. Please contact me to initiate these discussions.

Sincerely,

Evan J. Smith, Esquire

**ATTACHMENT 1: EPA BENCHMARKS AND WATER QUALITY STANDARDS FOR  
DISCHARGES TO FRESHWATER**

**A. EPA Benchmarks, 2008 Multi-Sector General Permit ("MSGP")**

<b>Parameter</b>	<b>Units</b>	<b>Benchmark Value</b>	<b>Source</b>
pH	pH Units	Less than 6.0 Greater than 9.0 (Instantaneous)	2008 MSGP; Industrial Stormwater Permit § XI(B) Tables 1-2
Oil & Grease	Mg/L	25 (Instantaneous) 15 (Annual)	2008 MSGP; Industrial Stormwater Permit § XI(B) Tables 1-2
Total Suspended Solids	Mg/L	400 (Instantaneous) 100 (Annual)	2008 MSGP; Industrial Stormwater Permit § XI(B) Tables 1-2
Chemical Oxygen Demand	Mg/L	120 (Annual)	2008 MSGP; Industrial Stormwater Permit § XI(B) Tables 1-2
Zinc, Total	Mg/L	0.26** (Annual)	2008 MSGP; Industrial Stormwater Permit § XI(B) Tables 1-2
Aluminum, Total	Mg/L	0.75 (Annual)	2008 MSGP; Industrial Stormwater Permit § XI(B) Tables 1-2
Iron, Total	Mg/L	1.0 (Annual)	2008 MSGP; Industrial Stormwater Permit § XI(B) Tables 1-2
Lead, Total	Mg/L	0.262** (Annual)	2008 MSGP; Industrial Stormwater Permit § XI(B) Tables 1-2
Copper, Total	Mg/L	0.0332** (Annual)	2008 MSGP; Industrial Stormwater Permit § XI(B) Tables 1-2
Cadmium, Total	Mg/L	0.0053** (Annual)	2008 MSGP; Industrial Stormwater Permit § XI(B) Tables 1-2

\*\* The NAL is the highest value used by the U.S. EPA based on their water hardness.

**B. Water Quality Standards – Discharge Limitations and Monitoring Requirements  
(40 CFR Part 131.38 (California Toxics Rule or CTR), May 18, 2000)**

Parameter	Units	Water Quality Objectives		Source
		4- Day Average	1-Hr Average	
Lead	Mg/L	0.0081	0.21	40 CFR Part 131.38
Zinc	Mg/L	0.081	0.090	40 CFR Part 131.38

**ATTACHMENT 2: TABLE OF EXCEEDENCES FOR  
JACK ENGLE & CO.**

The following table contains each stormwater sampling result which exceeds EPA Benchmarks and/or causes or contributes to an exceedance of CFR and/or Basin Plan Water Quality Standards. All EPA Benchmarks and CFR and/or Basin Plan Water Quality Standards are listed in Attachment 1. All stormwater samples were reported by the Facility during the past five (5) years.

<b>Reporting Period</b>	<b>Sample Date</b>	<b>Parameter</b>	<b>Result</b>	<b>Unit</b>
2016-2017	2/6/2017	Copper	0.071	Mg/L
2016-2017	1/19/2017	Copper	0.039	Mg/L
2016-2017	1/12/2017	O&G	43.5	Mg/L
2016-2017	1/12/2017	COD	210	Mg/L
2016-2017	1/12/2017	Copper	0.1	Mg/L
2016-2017	1/9/2017	Copper	0.076	Mg/L
2016-2017	12/16/2016	O&G	20.8	Mg/L
2016-2017	12/16/2016	COD	220	Mg/L
2016-2017	12/16/2016	Copper	0.064	Mg/L
2015-2016	3/7/2016	Copper	0.07	Mg/L
2015-2016	1/5/2016	Copper	0.078	Mg/L
2014-2015	12/2/2014	COD	132	Mg/L
2014-2015	12/2/2014	Copper	0.078	Mg/L
2014-2015	12/2/2014	Zinc	0.28	Mg/L
2012-2013	NO TESTING RESULTS REPORTED FOR ANY PARAMETER			
2011-2012	NO TESTING RESULTS REPORTED FOR ANY PARAMETER			

\* Jack Engle has failed to submit any pollutant testing whatsoever in the 2011-2012 and 2012-2013 annual reporting periods.

\* Jack Engle has failed to submit any Laboratory Reports for the 2011-2012, 2012-2013, and 2014-2015 annual reporting periods.

\* Jack Engle has recorded annual exceedances for (i) Copper and Oil and Grease in the 2016-2017 annual reporting period; (ii) Copper in the 2015-2016 annual reporting period; and (iii) COD, Copper, and Zinc in the 2014-2015 annual reporting period.

**ATTACHMENT 3: ALLEGED DATES OF EXCEEDANCES BY  
JACK ENGLE & CO.**

**January 1, 2012 – July 25, 2017**

Days with precipitation two-tenths of an inch or greater, as reported by NOAA's National Climatic Data Center, Station(s): Los Angeles Downtown USC, CA US, GHCND:USW00093134, when a stormwater discharge from the Facility is likely to have occurred. <http://www.ncdc.noaa.gov/cdo-web/search>
